6 underrated Claude connectors

The setup guide. What each one does, how to turn it on, what to ask.

Turn a connector on (about a minute)

1. Open Claude (web or desktop) and go to Customize > Connectors.
2. Click the + button next to Connectors to open the Connectors Directory.
3. Pick the connector, read what it can read and write, then click Connect.
4. Sign in to that service when asked. Claude only reaches what your account can reach.
5. Start a chat and ask in plain words. Claude brings the connector in when it fits.

Two rules

1. Read what a connector can do before you connect it. Some can change things, not just read.

2. Confirm every change that matters before Claude makes it. Test on a small project first.

Steps follow the Claude Help Center article "Use connectors to extend Claude's capabilities". Menus can change. Connector availability depends on your plan and the connector. Check the directory.

CONNECTOR 1 OF 6

Context7

Always-fresh docs

WHAT IT DOES

Claude pulls current, version-specific documentation and code examples for a library, straight from the source, instead of relying on what it remembers.

TRY ASKING

- Use Context7 and show me how routing works in the latest version of Next.js.
- Check the current docs for this library before you write the code.

TIP

Name the version you use. Ask Claude to cite which doc it read.

CONNECTOR 2 OF 6

OpusClip

Long video to clips

WHAT IT DOES

Turns long videos into short clips. Connect it, give Claude a long video, and it works with OpusClip to find moments worth clipping.

TRY ASKING

- Take this podcast episode and make short clips from the best moments.
- Which parts of this video would work as a 30 second clip?

TIP

Review every clip before you post. You pick what goes out.

CONNECTOR 3 OF 6

Supabase

Ask your database

WHAT IT DOES

Manage databases, authentication and storage from the chat. Ask questions in plain English and Claude works with your Supabase project.

TRY ASKING

- How many users signed up on Tuesday?
- Show me the tables in this project and what each one stores.

TIP

Start on a test project. Read before you let Claude change anything, and confirm each change.

CONNECTOR 4 OF 6

Harvest

Timesheets, done

WHAT IT DOES

Track time and review projects, budgets and invoices in Harvest without leaving Claude.

TRY ASKING

- Log 2 hours on the client call and 3 hours on design for today.
- How much of the budget is left on this project?

TIP

Check the totals yourself before you send an invoice.

CONNECTOR 5 OF 6

Playwright

It tests your site

WHAT IT DOES

Browser automation and end to end testing. Claude can open a real browser, click through pages, fill forms and take screenshots.

TRY ASKING

- Open my site, go through checkout, and tell me what breaks.
- Take screenshots of the pricing page on each step.

TIP

Point it at a staging site, not production data.

CONNECTOR 6 OF 6

ElevenLabs

Script to voice

WHAT IT DOES

Turn text into speech with ElevenLabs from inside Claude. Give it a script and get a voiceover back.

TRY ASKING

- Turn this script into a voiceover, calm and clear.
- Read this paragraph aloud so I can hear the pacing.

TIP

Check that your plan with the service covers what you generate.
